

Croissance et Organisation de l'Education Supérieure

Deux questions

- Devons-nous investir davantage dans l'université?
- Devons-nous changer la gouvernance de nos universités?

Question 1: Croissance et investissement dans l'éducation supérieure

Cri d'alarme de Lisbonne

- En 1999-2000, les Etats-Unis ont investi 3% de leur PIB dans l'éducation supérieure contre 1.4% dans l'Union Européenne
- In 1999-2000, 37.3% de la population américaine entre 25 et 64 ans ont un diplôme universitaire contre 23.8% de la population au sein de l' Union Européenne

Faut-il s'en inquiéter?

- Oui:
 - La croissance dans les pays développés repose sur l'innovation
- D'un autre côté:
 - Les Asian Tigers ont connu une forte croissance en investissement dans l'éducation primaire et secondaire

Notre approche

- Innovation “frontière” versus imitation
- Innovation “frontière” devient de plus en plus un levier de croissance à mesure qu’un pays se rapproche de la frontière technologique
- Par conséquent, plus un pays ou une région se rapproche de la frontière technologique, plus il doit investir dans l’université et la recherche

Econométrie sur les pays

Table 1: TFP Growth Equation (Fractions BL)

Econométrie sur les Etats
américains....ou comment le
clientélisme fait le bonheur de
l'économetre

Analyse sur les Etats américains

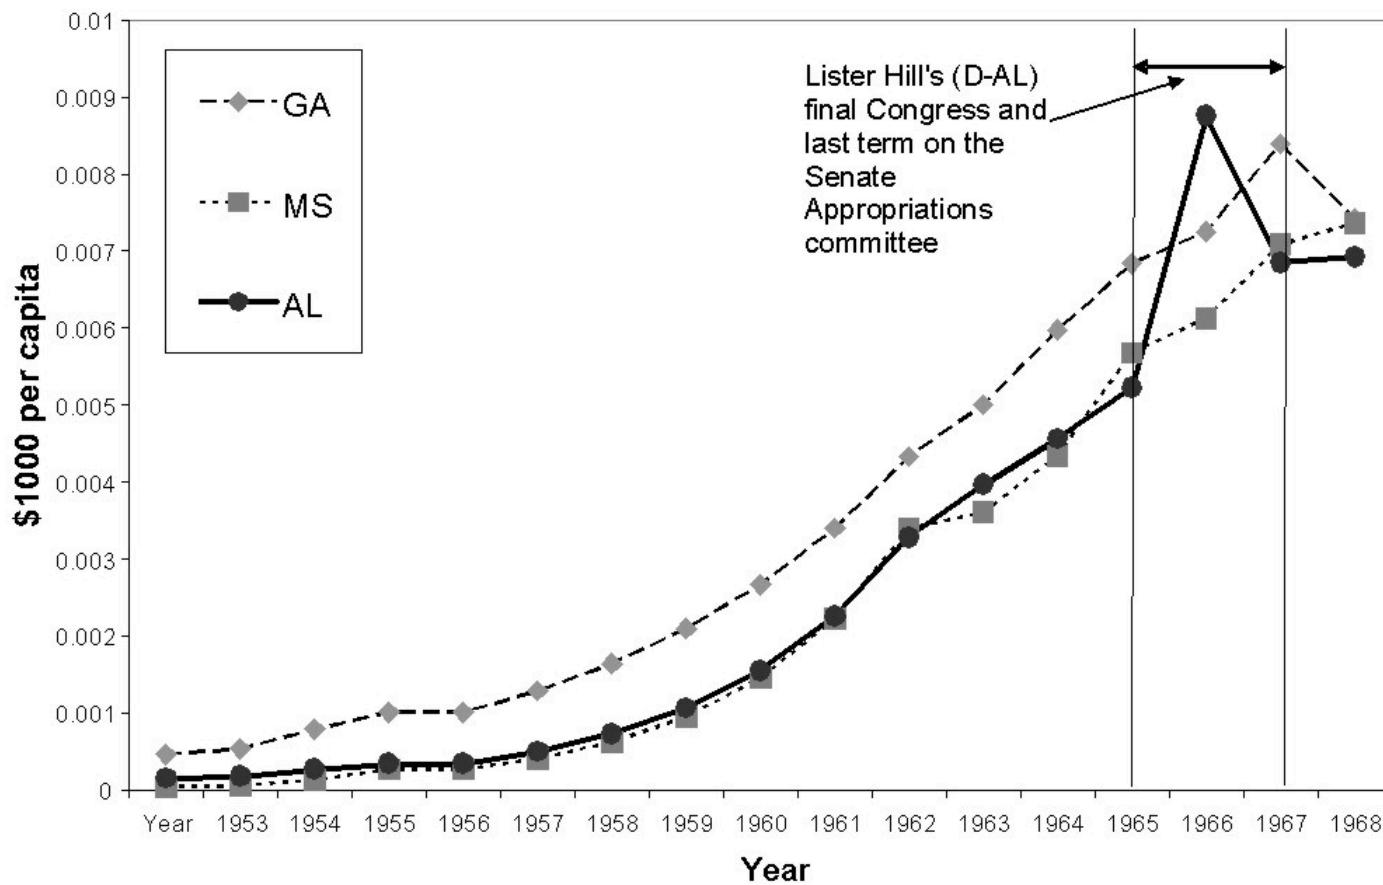

- On considère 26 cohortes dans 48 Etats
- Avantage:
 - Plus grande abondance et homogénéité des données
 - Meilleurs instruments
- Inconvénient
 - Il faut prendre en compte les migrations d'un Etat vers un autre

Le clientélisme comme instrument

- Individual appointments to key appropriations committees generate state “mistakes” (arbitrary shocks) to education investments
 - A vacancy on a appropriations committee happens to arise when the state’s representative is “first in line” based on seniority & geography
 - Once on the committee, the legislator needs to pay back his constituents.
 - His position only gives him ability to deliver in specific forms especially “earmarked” grants to universities and highway funds.
 - He ends up making education investments based on the forms of pork he can deliver.

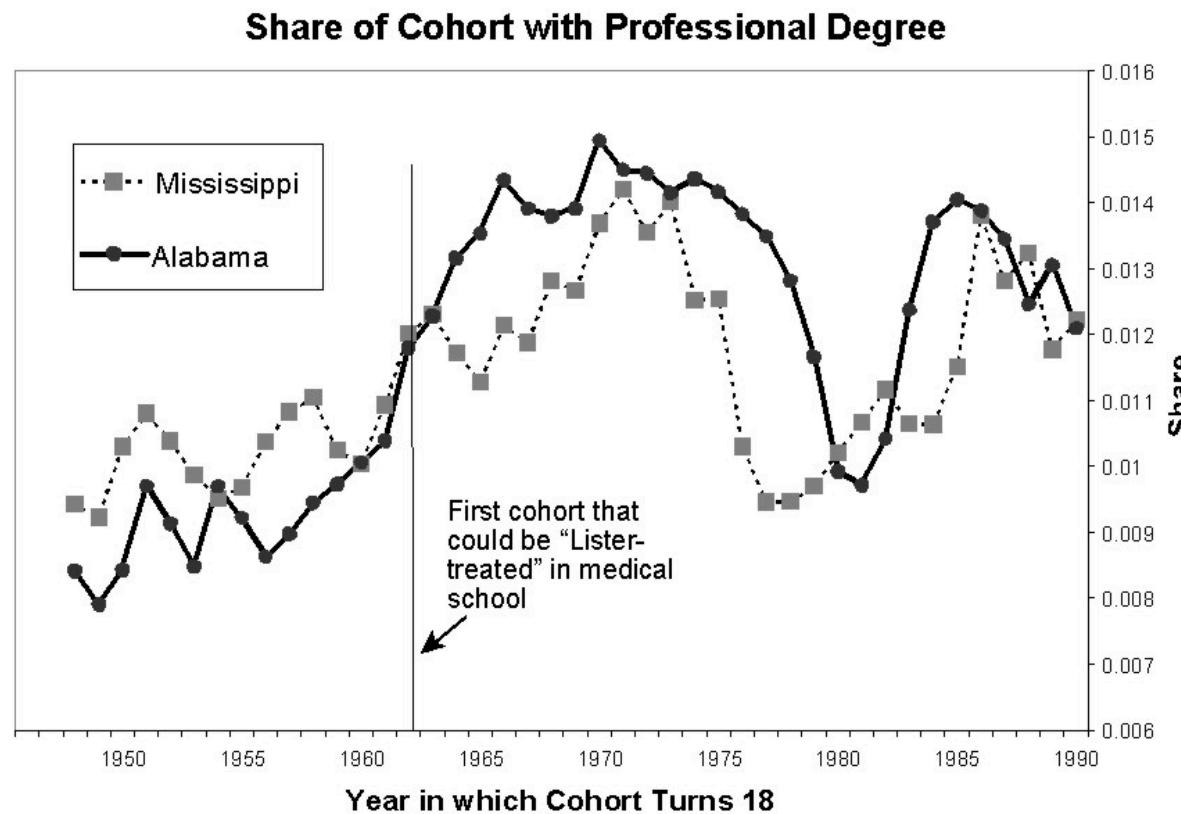

Case Study: Alabama (Lister Hill)

Appropriations Committee Membership & Federal Spending
on Research Education, Alabama Case Study

Appropriations Committee Membership & Educational Attainment: Alabama Case Study

Case Study: Massachusetts (Conte)

Appropriations Committee Membership & Federal Spending
on Research Education, Massachusetts Case Study

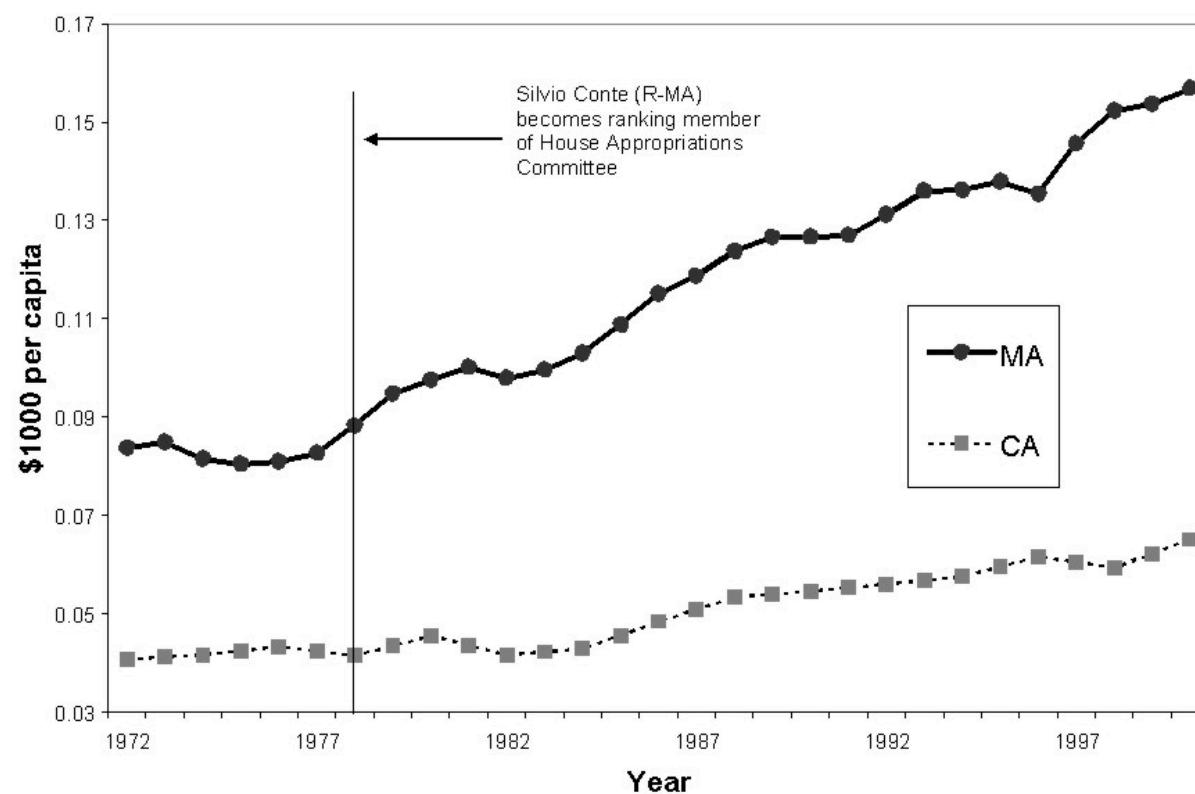

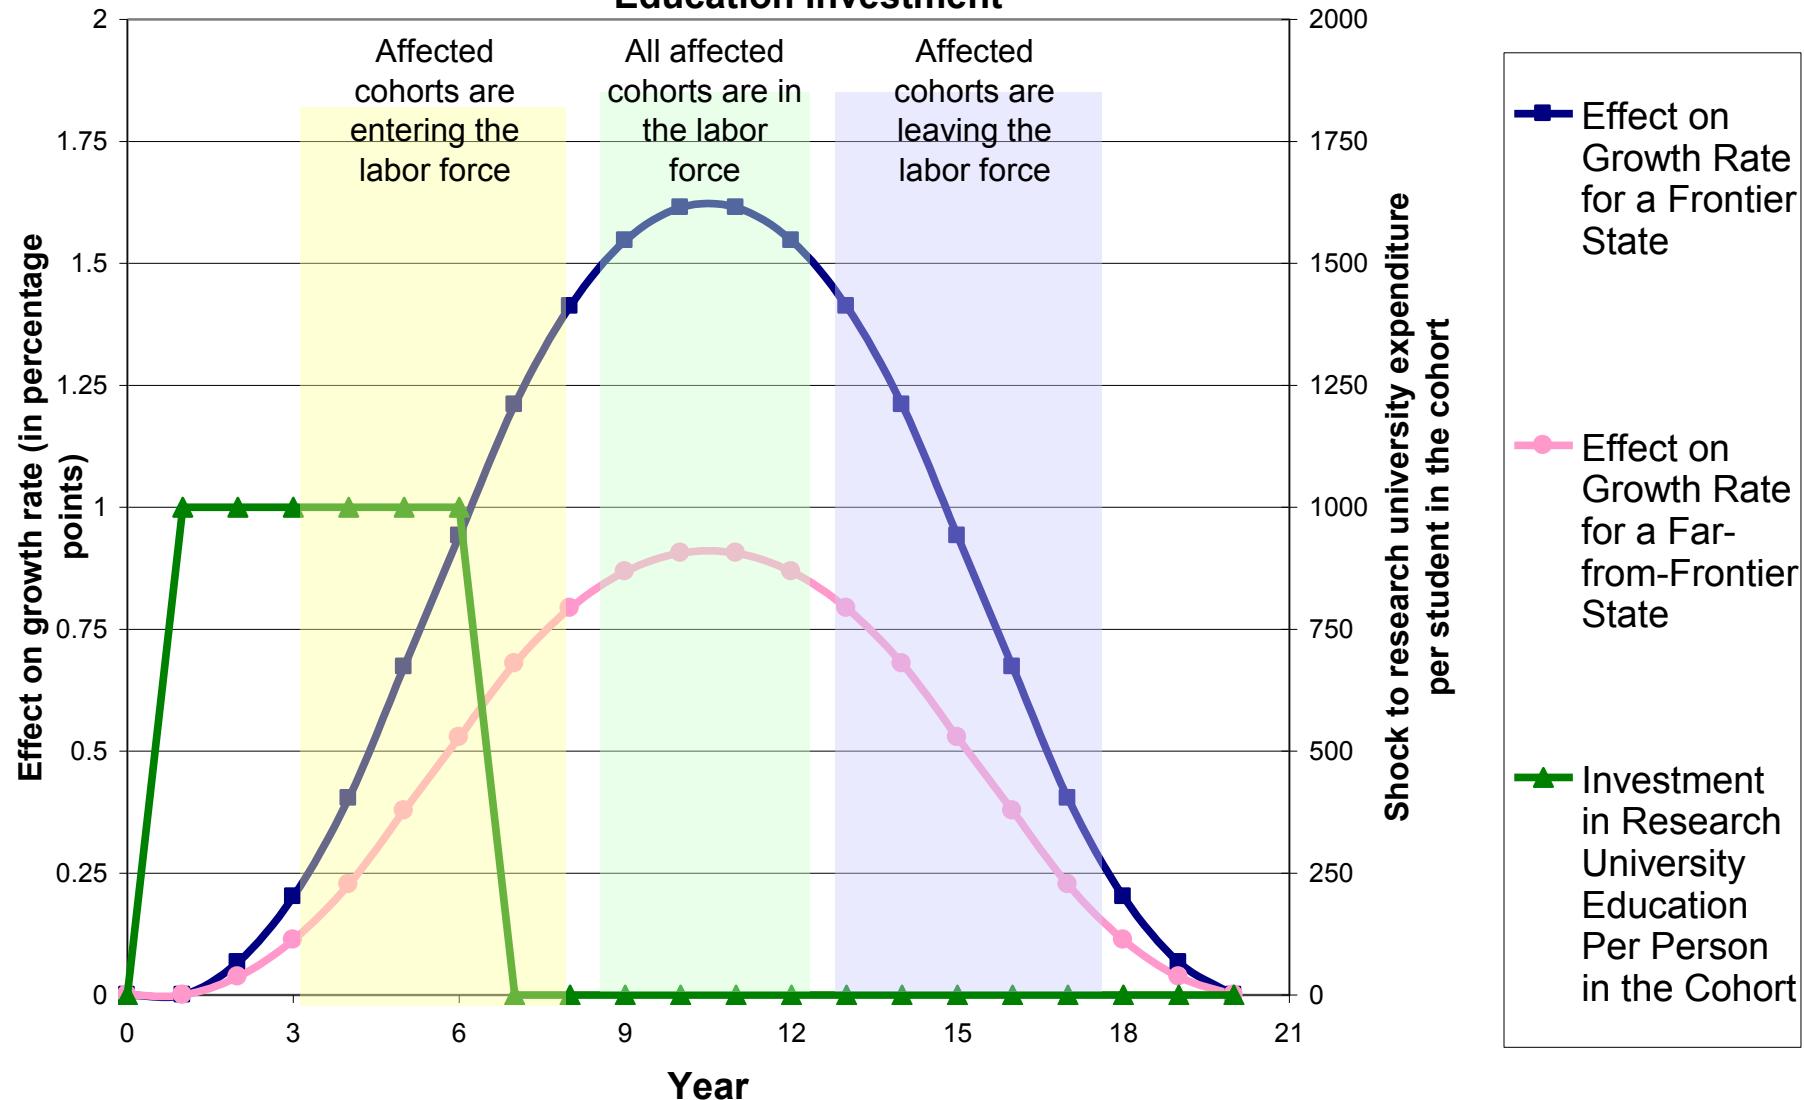

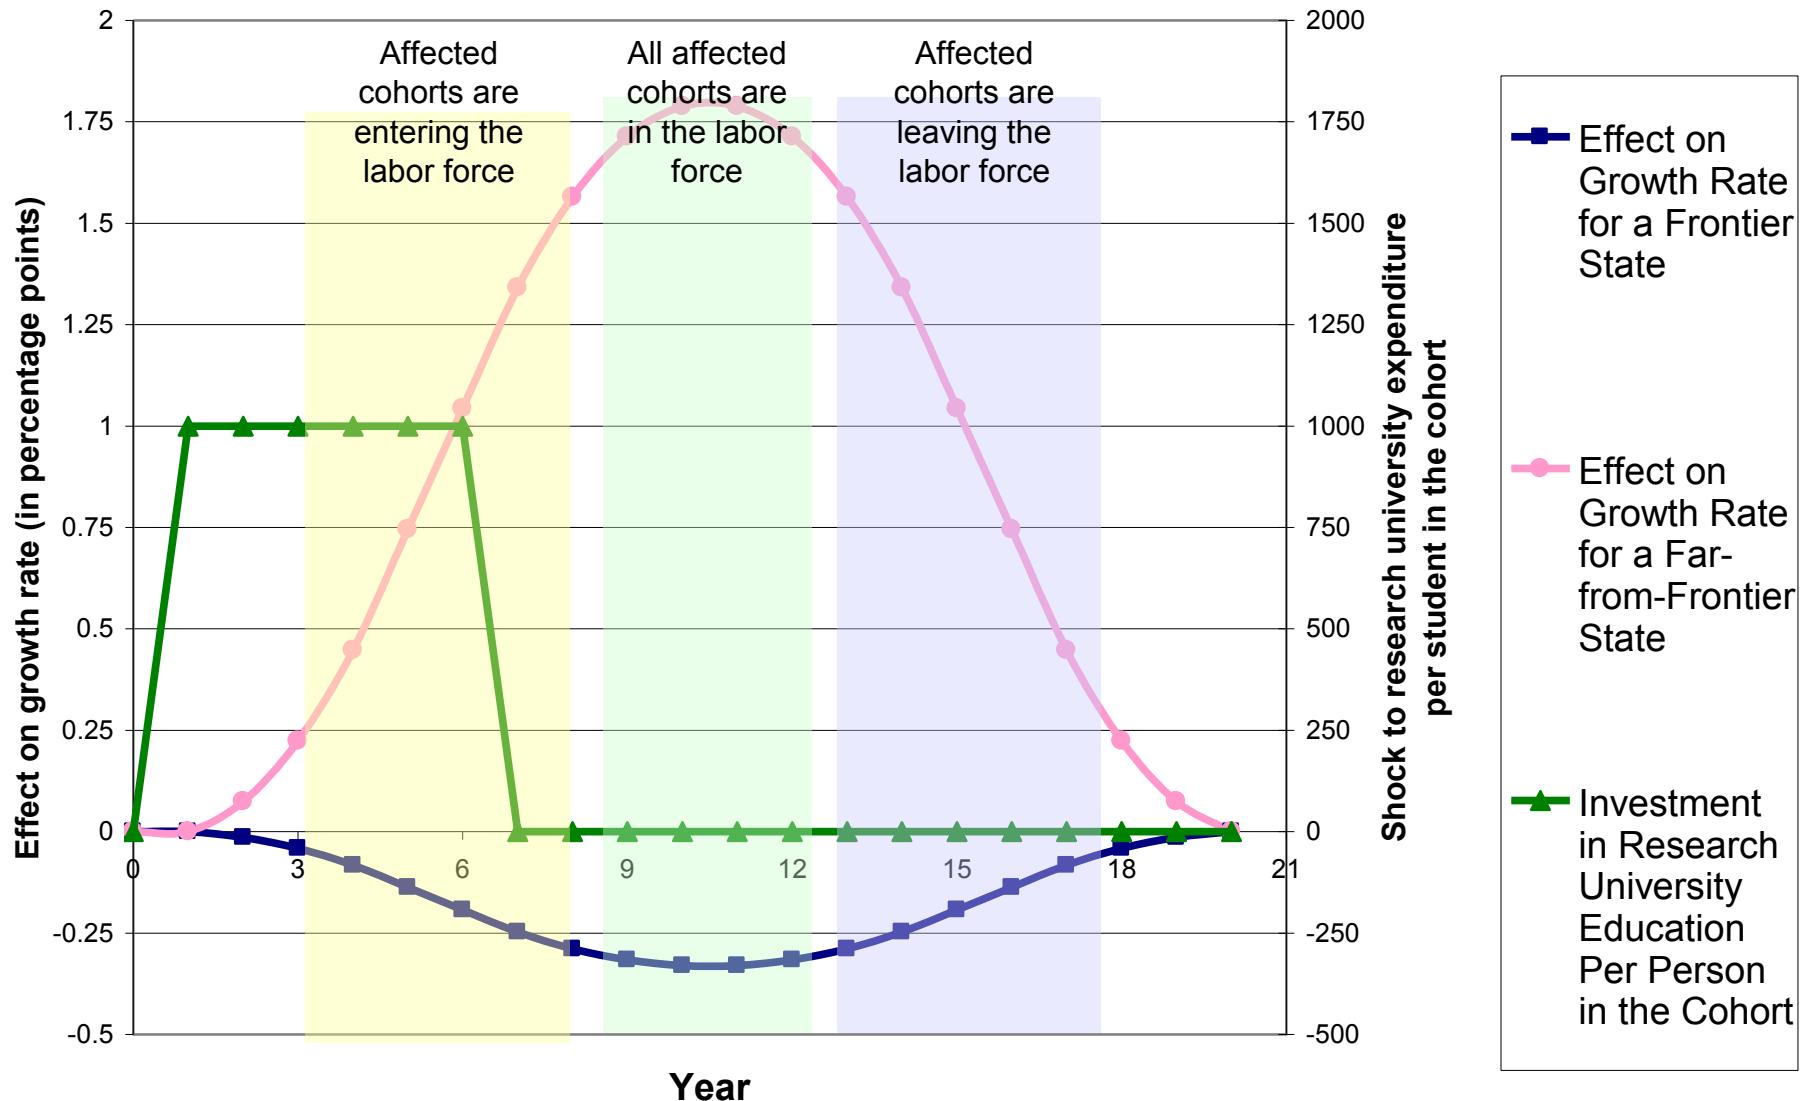

Figure 15: Effect on Growth Rates for Typical Shock to Research-Type Education Investment

Effect on Growth Rates for Typical Shock to 2-Yr College Education Investment

Results: Education investment measured by spending; migration un-done

Effects for far-from-frontier states (0.5 of frontier)	
Expenditure (M) on research-type ed per person in cohort	0.079
Expenditure (M) on 4-yr college ed per person in cohort	-0.008
Expenditure (M) on 2-yr college ed per person in cohort	0.149
Effects for at-the-frontier states	
Expenditure (M) on research-type ed per person in cohort	0.157
Expenditure (M) on 4-yr college ed per person in cohort	0.051
Expenditure (M) on 2-yr college ed per person in cohort	-0.024

Résumé

- A la fois l'économetrie sur données de pays et celle sur les Etats américains, montrent qu'investir dans l'éducation plus avancée stimule davantage la croissance de la productivité dans les pays ou Etats plus proches de la frontière technologique
- Inversement, se concentrer sur l'éducation primaire, secondaire et le 1er cycle universitaire stimule davantage la croissance dans les pays ou Etats américains plus loin de la frontière technologique

Question 2: Gouvernance et Performance des Universités

Questions

Est-ce que des universités gouvernées différemment performent différemment?

- ❖ En termes de performances de recherches (brevets, Shanghai, ..)?
- ❖ En termes d'impact sur la croissance du pays ou de la région?

Importance de l'autonomie des universités:

- ❖ Budget?
- ❖ Ressources Humaines?
- ❖ Choix d'équipements?
- ❖ Choix des programmes?

Shanghai

The Shanghai index puts weights on 6 criteria:

1. Alumni winning Nobel Prizes and Fields Medals (10%)
2. Faculty winning Nobel Prizes and Fields Medals (physics, chemistry, medicine and economics) and Field Medals in mathematics (20%)
3. Articles published in Nature and Science (20%)
4. Articles in Science Citation Index-expanded and Social Science Citation Index (20%)
5. Highly cited researchers in 21 broad subject categories (20%),
6. Academic performance with respect to the size of an institution (10%)

The ranking is oriented towards pure science, as opposed to applied science, social science, or the humanities.

- We'll examine the overall index (500=top, 1=bottom) and highly cited researchers, the broadest-based component.

Gouvernance: Europe

A survey on governance was sent to European universities in the top 500 of the Shanghai ranking in 2006

- 196 universities, 14 countries
- University characteristics: age, public/private, # of students, faculties (medicine, law, natural sciences...).
- University operating independence:
 - Does the university set its own curriculum?
 - Does the university select its own students or is there centralized allocation?
 - To what degree does the university select its own professors?
 - Is there strong endogamy (% of professors with PhD from their university), which suggests that hiring is not open?
 - What is the role of state in setting wages?
 - Are all professors with the same seniority paid the same wage?
 - What share of funding is core public funding that the university can influence only through politics?
 - What share of funding can be controlled by the university? For instance, does the university control its tuition or compete for research grants?
 - What is the composition of the university board (# of faculty, students, scientific personnel...).
 - What are the voting rights of board members?

Table 3: Characteristics of the universities in the sample (country averages)

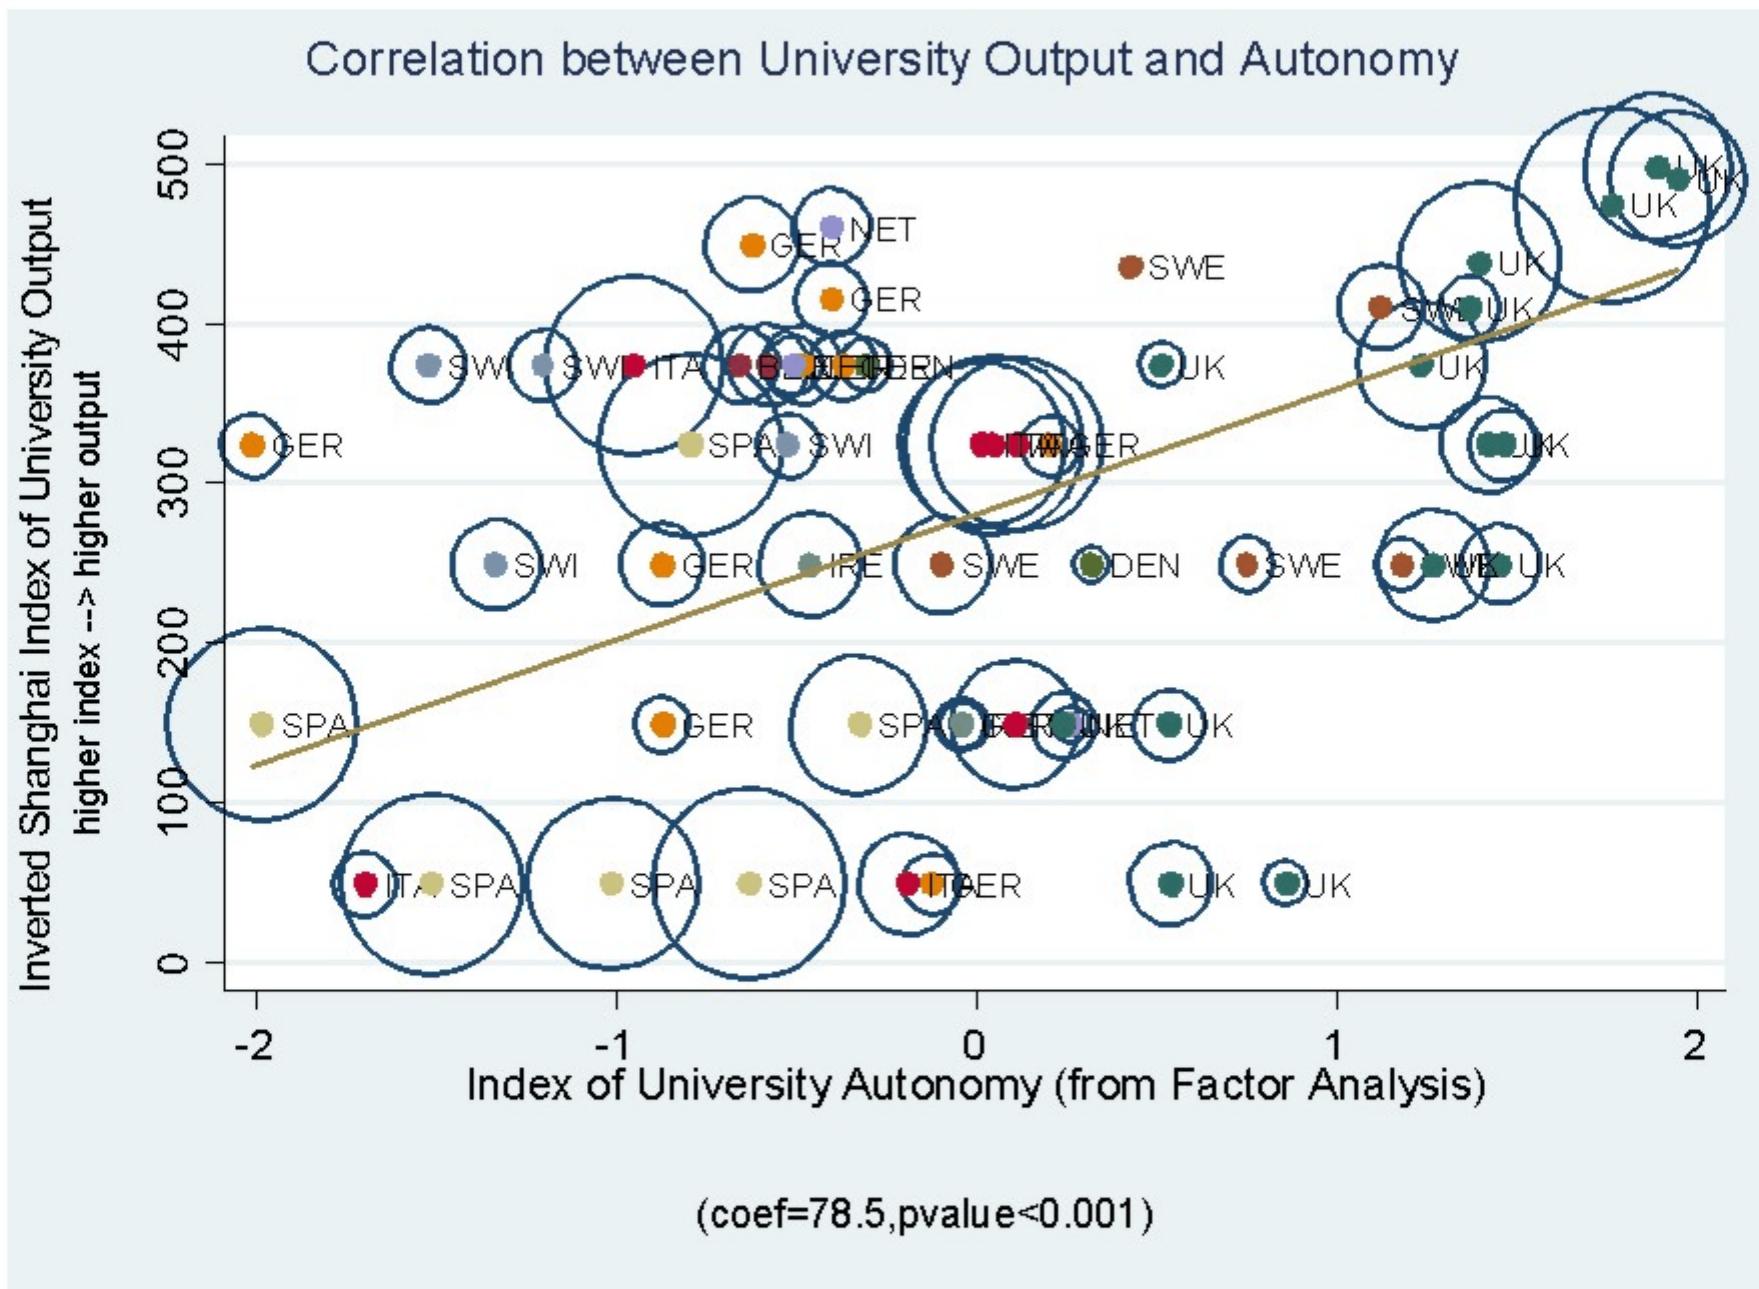

Country	Age (years)	Number of students (thousands)	Budget per student (1 000€)*	Public status*	Budget autonomy [§]	Building ownership [§]	Hiring autonomy [§]	Wage-setting autonomy [§]	Faculty with in-house PhD (%)

* Measured by the (logarithm of the)
Shanghai ranking

Gouvernance: économétrie sur données américaines

Mesurer l'autonomie des universités

- Pourcentage d'universités privées dans l'Etat
 - Les universités privées sont supposées être plus autonomes que les universités publiques

Mesurer l'autonomie des universités

- Une université publique est plus autonome si...
 - Indépendance budgétaire à l'égard de l'Etat
 - Libre de décider de ses achats d'équipements
 - Libre de décider de sa politique de ressources humaines (embauche, séparation, salaires,...)

Mesurer l'autonomie des universités

- Deux mesures d'autonomie
 - Pourcentage d'universités de recherche privées dans l'Etat
 - Indice d'autonomie pour les universités publiques
 - Analyse en composantes principales

Conclusion

- La croissance dans les pays plus avancés bénéficie davantage de l'existence d'universités plus performantes
- La performance repose sur la combinaison entre un bon financement et une bonne gouvernance
