## 2. Des situations de commande questions d'architecture et historiographie

Sur le plan de l'architecture ces situations de commande et des conditions de réalisation de l'œuvre permettent de voir:

a. Premièrement le parcours de l'architecte par rapport aux enjeux du métier

b. Sur le plan de l'historiographie elles permettent de percevoir l'architecture et comme œuvre individuelle et collective, le jeu de acteurs en ce faire et comment les conflits, les négociations, les positions de pouvoir construisent les réalisations elle même.
