Formalization of Mathematics and Dependent Types

Plenary
Special Plenary Lecture
Room 1

Saturday, July 9, 10:15 - 11:15

The rise of formalism in mathematics

Lecture on proof formalisation for ordinary mathematicians

Abstract:

Formalism is the art of writing down what you actually mean. Mathematics has a rich history of formalisation: Euclid, Russell-Whitehead and Bourbaki all tried it. This century Avigad, Hales and Gonthier have shown us that there is another way. Now a new generation of young people are formalising algebra, analysis, category theory, combinatorics, geometry, number theory, topology and more at Masters level and beyond, this time using a computer. Lean's mathematics library **mathlib** contains nearly a million lines of free and open source code corresponding to proofs of over 80,000 theorems such as the fundamental theorem of Galois theory, and it is growing fast. Als trained on the library have solved IMO problems by themselves. What is happening? This is not about making sure the papers are right. This is not about making a computer program which will print out a one billion line proof of the Birch and Swinnerton-Dyer conjecture using only the axioms of mathematics. This is not about extracting the beauty from a proof and leaving only the directed acyclic graph. This is about developing computer tools which have the potential to help researchers and PhD students in new ways. Much remains to be done. I will give an overview of the area.

Chair: Martin Hairer (United Kingdom)

Plenary Speaker: Kevin Buzzard (United Kingdom)

A fast growing corpus of formalized mathematics

[A computer-checked proof of the four color theorem, G. Gonthier 2003]

[A formal proof of the Odd Order theorem, Gonthier et al., Proc. of ITP 2013]

[A formal proof of the Kepler conjecture Hales et al., Cambridge University Press, 2017]

[Formalising the h-Principle and Sphere Eversion, F. van Doorn, P. Massot, O. Nash, Procs. of CPP 2023]

Quoting P. Schölze about the Liquid Tensor experiment:

“(…) This makes the rest of the proof of the Liquid Tensor Experiment considerably more explicit and more elementary, removing any use of stable homotopy theory. I expect that Commelin’s complex may become a standard tool in the coming years.”

“(…) this made me realize that actually the key thing happening is a reduction from a non-convex problem over the reals to a convex problem over the integers.”

Ready for monumental endeavors

FLT

Ongoing Lean formalisation of the proof of Fermat's Last Theorem

[Readme](#)[Versions \(15\)](#)[Dependencies \(10\)](#)

Fermat's Last Theorem

Website **ready** Documentation **passing** Blueprint **WIP** Paper **WIP** Gitpod **ready-to-code**

An ongoing multi-author open source project to formalise a proof of Fermat's Last Theorem in the Lean theorem prover.

Information about the project

The project is currently being led by Kevin Buzzard. Until September 2029 it is being funded by [grant EP/Y022904/1](#), awarded by the EPSRC. The project is hosted at Imperial College London. Kevin would like to extend many many thanks to both of these institutions for their ongoing support of this nonstandard research.

General information ("What is Fermat's Last Theorem/Lean?" / "Why are you doing this?" etc) is [here](#).

The route we will be taking was planned out essentially entirely by Richard Taylor in discussions with Buzzard. It is a modern variant of the original Wiles/Taylor-Wiles proof. For more details about the mathematics behind the proof, a good place to start is the [blueprint](#).

Information on how to contribute is available [here](#).

By Cauchy-Schwarz, this is at most

$$\sqrt{\frac{1}{2\pi} \int_{-\frac{1}{2}-i\infty}^{-\frac{1}{2}+i\infty} \left| \frac{L'(s, \chi)}{L(s, \chi)} \cdot \frac{1}{s} \right|^2 |ds|} \cdot \sqrt{\frac{1}{2\pi} \int_{-\frac{1}{2}-i\infty}^{-\frac{1}{2}+i\infty} |G_\delta(s) s|^2 |ds|}$$

By (4.12),

$$\begin{aligned} \sqrt{\int_{-\frac{1}{2}-i\infty}^{-\frac{1}{2}+i\infty} \left| \frac{L'(s, \chi)}{L(s, \chi)} \cdot \frac{1}{s} \right|^2 |ds|} &\leq \sqrt{\int_{-\frac{1}{2}-i\infty}^{-\frac{1}{2}+i\infty} \left| \frac{\log q}{s} \right|^2 |ds|} \\ &\quad + \sqrt{\int_{-\infty}^{\infty} \frac{\left| \frac{1}{2} \log \left(\tau^2 + \frac{9}{4} \right) + 4.1396 + \log \pi \right|^2}{\frac{1}{4} + \tau^2} d\tau} \\ &\leq \sqrt{2\pi} \log q + \sqrt{226.844}, \end{aligned}$$

where we compute the last integral numerically⁴

- Ball arithmetic (cf F. Johansson's Arb)

Objective: complement Coq/Rocq's Interval library with a center-radius variant:

$$\mathbb{B}(m, r) \triangleq \{ x \in \mathbb{R}^n \mid \|m - x\| \leq r \}, \text{ for } m \in \mathbb{R}^n, r \in \overline{\mathbb{R}^+}$$

Objective: complement Coq/Rocq's Interval library with a center-radius variant:

$$\mathbb{B}(m, r) \triangleq \{ x \in \mathbb{R}^n \mid \|m - x\| \leq r \}, \text{ for } m \in \mathbb{R}^n, r \in \overline{\mathbb{R}}^+$$

Ingredients:

- Different types of numbers

$$\mathbb{F} \subset \mathbb{R}_\perp \subset \overline{\mathbb{R}_\perp} \text{ and } \mathbb{F} \subset \overline{\mathbb{R}_\perp}^+ \subset \overline{\mathbb{R}_\perp}$$

- Different types of balls

for $m, r \in \mathbb{F}$, for $m \in \mathbb{R}$ and $r \in \overline{\mathbb{R}}^+$, NaBs, ...

What brave interns end up spending their implementation efforts on

```
lemma add_Fball_Rball : forall p b1 b2, subset (add_Rball (convert b1) (convert b2)) (convert (Radd p b1 b2)).
Proof.
  move=> p.
  case=> [| m1 r1] //.
  case=> [| m2 r2] //.
  - by case (add_Rball (convert (Bwr m1 r1))).
  - unfold subset => /.
  move: (add_NR_correct p m1 m2).
  case: (F.toK m1) => [H1 | m1'] /.
  + by rewrite H1.
  + case: (F.toK m2) => [H2 | m2' H] /.
    * by rewrite H2.
    * destruct H.
    move: H. rewrite F.real_correct.
    move: H@.
    case: (F.toK (add_NR p m1 m2)) => //.
    move=> r H ...
    move: (add_UP_correct p r1 r2).
    case: (F.toK r1) .
  ++ move=> H2 /.
  move: (add_UP_correct p
    (add_UP p r1 r2)
    (Delta p (add_NR p m1 m2))).
    rewrite H2 => H3.
    by rewrite H3.
  ++ move=> r1'.
  case: (F.toK r2).
  ++ move=> H2 /.
  move: (add_UP_correct p
    (add_UP p r1 r2)
    (Delta p (add_NR p m1 m2))).
    rewrite H2 => H3.
    by rewrite H3.
  ++ move=> r2' /.
  move: H => /- H1 H2.
  move: (add_UP_correct p
    (add_UP p r1 r2)
    (Delta p (add_NR p m1 m2))).
    move: H2.
    case: (F.toK (add_UP p r1 r2)).
    +++ move=> H2 H3.
    rewrite H3 => //.
    +++ move=> a H2.
    move: H1.
    case: (F.toK (Delta p (add_NR p m1 m2))).
    *** move=> H1 H3.
    rewrite H3 => //.
    *** move=> b H1.
    case: (F.toK (add_UP p
      (add_UP p r1 r2)
      (Delta p (add_NR p m1 m2)))) => //.
    move => r_add.
    move: H1 H2.
    unfold le_upper => /.
    move=> H1 H2 H3.
    have H4 : -b <= r - (m1' + m2') <= b. exact: Stdlib.Rabs_def2_le.
    apply Rle_minus_r.
    apply Rabs_le.
```

Proving this specification of the ball addition takes 58l.

A few examples among many:

Natural numbers, in unary and binary representation

Natural numbers in unary representation

```
(* Unary representation for natural numbers *)
Inductive nat : Type := 0 : nat | S : nat -> nat.

Check nat_ind : ∀P : nat -> Type,
  P 0 -> (forall n : nat, P n -> P (S n)) -> ∀n : nat, P n

Definition (_ + _) : nat -> nat -> nat := fun x, y : nat =>
  match x, y with
  | 0, m => m (* 0 + m = m *)
  | S n, m => S (n + m) (* (S n) + m = S (n + m) *)
  end.

Fact test_add : 17 + 3 = 20. Proof. by compute. Qed.

Definition prime x : nat -> bool := ...

Fact test_prime : prime 17 = true. Proof. by compute. Qed.

(* too long *)
Fact test_prime_larger : prime 29986577 = true. Proof. by compute. Qed.
```

Natural numbers, in binary representation

```
Inductive positive : Type :=  
  | xI : positive → positive (* p1 *)  
  | x0 : positive → positive (* p0 *)  
  | xH : positive.           (* 1  *)
```

```
Inductive N : Type :=  
  | ON : N  
  | Npos : positive → N.
```

Natural numbers, in binary representation

```
Inductive positive : Type :=  
  | xI : positive → positive (* p1 *)  
  | x0 : positive → positive (* p0 *)  
  | xH : positive.           (* 1 *)  
  
Inductive N : Type :=  
  | 0N : N  
  | Npos : positive → N.  
  
Check N_ind : ∀P : N -> Prop, P 0N -> (∀ p : positive, P (Npos p)) -> ∀ n : N, P n
```

Natural numbers, in binary representation

```

- $[\forall X, F X] \triangleq \{(f_1, f_2) \mid \forall A A', \forall \mathcal{R}, (f_1 A, f_2 A') \in F \mathcal{R}\}$

with $F\mathcal{R}$ defined by:

- $\mathcal{R}_1 \rightarrow \mathcal{R}_2 \triangleq \{(f_1, f_2) \mid \forall a a', (a, a') \in \mathcal{R}_1 \Rightarrow (f_1 a, f_2 a') \in \mathcal{R}_2\}$
- $\forall \mathcal{R}, F \mathcal{R} \triangleq \{(f_1, f_2) \mid \forall A A', \forall \mathcal{R}, (f_1 A, f_2 A') \in F \mathcal{R}\}$

Extensions:

- $\mathcal{R}_1 \times \mathcal{R}_2$ relates pairs of related elements
- *list* \mathcal{R} relates lists of same length, with pairwise related elements
- ...

Theorem (Abstraction theorem for system F)

If $\vdash t : T$ in System F, then $[T] t t$

Theorem (Abstraction theorem for system F)

If $\vdash t : T$ in System F, then $[T] t t$

Also related to realizability, logical relations, full abstraction ...

Example of free theorem: $\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$

Example of free theorem

Prove that $\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$

Example of free theorem

Prove that $\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$

By relating:

- $\text{fold } \mathbb{N} +_{\mathbb{N}} 0_{\mathbb{N}} [0_{\mathbb{N}}, \dots, 17_{\mathbb{N}}]$
- $\text{fold } \mathbb{N} +_{\mathbb{N}} 0_{\mathbb{N}} [0_{\mathbb{N}}, \dots, 17_{\mathbb{N}}]$

Example of free theorem

Prove that $\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$

By relating:

- $\text{fold } \mathbb{N} +_{\mathbb{N}} 0_{\mathbb{N}} [0_{\mathbb{N}}, \dots, 17_{\mathbb{N}}]$
- $\text{fold } \mathbb{N} +_{\mathbb{N}} 0_{\mathbb{N}} [0_{\mathbb{N}}, \dots, 17_{\mathbb{N}}]$

Via:

- Relation $\mathcal{R} \triangleq \{(x, y) \mid y = \uparrow_{\mathbb{N}} x\}$

Example of free theorem

Prove that $\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$

By relating:

- $\text{fold } \mathbb{N} +_{\mathbb{N}} 0_{\mathbb{N}} [0_{\mathbb{N}}, \dots, 17_{\mathbb{N}}]$
- $\text{fold } \mathbb{N} +_{\mathbb{N}} 0_{\mathbb{N}} [0_{\mathbb{N}}, \dots, 17_{\mathbb{N}}]$

Via:

- Relation $\mathcal{R} \triangleq \{(x, y) \mid y = \uparrow_{\mathbb{N}} x\}$

Using:

- $[A \rightarrow B] \triangleq \{(f_1, f_2) \mid \forall a a', (a, a') \in [A] \Rightarrow (f_1 a, f_2 a') \in [B]\}$
- $[\forall X, F X] \triangleq \{(f_1, f_2) \mid \forall A A', \forall \mathcal{R}, (f_1 A, f_2 A') \in F \mathcal{R}\}$

with:

- $\mathcal{R}_1 \rightarrow \mathcal{R}_2 \triangleq \{(f_1, f_2) \mid \forall a a', (a, a') \in \mathcal{R}_1 \Rightarrow (f_1 a, f_2 a') \in \mathcal{R}_2\}$
- $\forall \mathcal{R}, F \mathcal{R} \triangleq \{(f_1, f_2) \mid \forall A A', \forall \mathcal{R}, (f_1 A, f_2 A') \in F \mathcal{R}\}$
- *list* \mathcal{R} relates lists of same length, with pairwise related elements

Parametricity translations for dependent type theory

A binary relation on type A and B is a term of type $A \rightarrow B \rightarrow \mathcal{U}$.

A binary relation on type A and B is a term of type $A \rightarrow B \rightarrow \mathcal{U}$.

- Term translation:

$$\llbracket \mathcal{U} \rrbracket \triangleq \lambda A B. A \rightarrow B \rightarrow \mathcal{U}$$

$$\llbracket x \rrbracket \triangleq x_R$$

$$\llbracket A B \rrbracket \triangleq \llbracket A \rrbracket B B' \llbracket B \rrbracket$$

$$\llbracket \lambda x : A. t \rrbracket \triangleq \lambda (x : A)(x' : A')(x_R : \llbracket A \rrbracket x x'). \llbracket t \rrbracket$$

$$\llbracket \forall x : A. B \rrbracket \triangleq \lambda f f'. \forall (x : A)(x' : A')(x_R : \llbracket A \rrbracket x x'). \llbracket B \rrbracket (f x)(f' x')$$

A binary relation on type A and B is a term of type $A \rightarrow B \rightarrow \mathcal{U}$.

- Term translation:

$$\llbracket \mathcal{U} \rrbracket \triangleq \lambda A B. A \rightarrow B \rightarrow \mathcal{U}$$

$$\llbracket x \rrbracket \triangleq x_R$$

$$\llbracket A B \rrbracket \triangleq \llbracket A \rrbracket B B' \llbracket B \rrbracket$$

$$\llbracket \lambda x : A. t \rrbracket \triangleq \lambda (x : A)(x' : A')(x_R : \llbracket A \rrbracket x x'). \llbracket t \rrbracket$$

$$\llbracket \forall x : A. B \rrbracket \triangleq \lambda f f'. \forall (x : A)(x' : A')(x_R : \llbracket A \rrbracket x x'). \llbracket B \rrbracket (f x)(f' x')$$

Theorem (Abstraction theorem)

If $\vdash t : T$ then $\vdash \llbracket t \rrbracket : \llbracket T \rrbracket t t$.

A binary relation on type A and B is a term of type $A \rightarrow B \rightarrow \mathcal{U}$.

- Term translation:

$$\llbracket \mathcal{U} \rrbracket \triangleq \lambda A B. A \rightarrow B \rightarrow \mathcal{U}$$

$$\llbracket x \rrbracket \triangleq x_R$$

$$\llbracket A B \rrbracket \triangleq \llbracket A \rrbracket B \llbracket B' \rrbracket \llbracket B \rrbracket$$

$$\llbracket \lambda x : A. t \rrbracket \triangleq \lambda (x : A)(x' : A')(x_R : \llbracket A \rrbracket x x'). \llbracket t \rrbracket$$

$$\llbracket \forall x : A. B \rrbracket \triangleq \lambda f f'. \forall (x : A)(x' : A')(x_R : \llbracket A \rrbracket x x'). \llbracket B \rrbracket (f x)(f' x')$$

- Context translation:

$$\llbracket \langle \rangle \rrbracket \triangleq \langle \rangle$$

$$\llbracket \Gamma, x : A \rrbracket \triangleq \llbracket \Gamma \rrbracket, x : A, x' : A', x_R : \llbracket A \rrbracket x x'$$

Theorem (Abstraction theorem)

If $\Gamma \vdash t : T$ then $\llbracket \Gamma \rrbracket \vdash t : T$, $\llbracket \Gamma \rrbracket \vdash t' : T'$ and $\llbracket \Gamma \rrbracket \vdash \llbracket t \rrbracket : \llbracket T \rrbracket t t'$.

Formal proofs for free?

This should be enough for:

- Refinements:

$$2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}} = \uparrow_{\mathbb{N}} (2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}})$$

- More refinements:

$$\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$$

- Identities:

`Fact addN_assoc` : $\forall x y : \mathbb{N}, x + (y + z) = (x + y) + z.$

- Induction principles:

`Fact N_ind` : $\forall P : \mathbb{N} \rightarrow \text{Prop},$
 $P\ 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P\ n \rightarrow P\ (S_{\mathbb{N}}\ n)) \rightarrow \forall n : \mathbb{N}, P\ n.$

- Implications, e.g, using $\mathbb{N} \subset \mathbb{Z}$

Formal proofs for free?

This should be enough for:

- Refinements: **Yes**

$$2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}} = \uparrow_{\mathbb{N}} (2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}})$$

- More refinements: **Yes**

$$\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$$

- Identities:

Fact **addN_assoc** : $\forall x y : \mathbb{N}, x + (y + z) = (x + y) + z.$

- Induction principles:

Fact **N_ind** : $\forall P : \mathbb{N} \rightarrow \text{Prop},$
 $P\ 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P\ n \rightarrow P\ (S_{\mathbb{N}}\ n)) \rightarrow \forall n : \mathbb{N}, P\ n.$

- Implications, e.g, using $\mathbb{N} \subset \mathbb{Z}$

Formal proofs for free?

This should be enough for:

- Refinements: **Yes**

$$2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}} = \uparrow_{\mathbb{N}} (2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}})$$

- More refinements: **Yes**

$$\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$$

- Identities: **No**

Fact `addN_assoc` : $\forall x y : \mathbb{N}, x + (y + z) = (x + y) + z.$

- Induction principles: **No**

Fact `N_ind` : $\forall P : \mathbb{N} \rightarrow \text{Prop},$
 $P\ 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P\ n \rightarrow P\ (S_{\mathbb{N}}\ n)) \rightarrow \forall n : \mathbb{N}, P\ n.$

- Implications, e.g, using $\mathbb{N} \subset \mathbb{Z}$ **No**

The key ingredient is to turn:

$$\llbracket \mathcal{U} \rrbracket A B \triangleq A \rightarrow B \rightarrow \mathcal{U}$$

Into:

$$\llbracket \mathcal{U} \rrbracket A B \triangleq \Sigma(R : A \rightarrow B \rightarrow \mathcal{U}), \dots$$

$$\llbracket \mathcal{U} \rrbracket A B \triangleq \Sigma(R : A \rightarrow B \rightarrow \mathcal{U}), R \text{ is a type equivalence}$$

[The Marriage of Univalence and Parametricity - N. Tabareau, E. Tanter, M. Sozeau. J. ACM (2021)]

$$\llbracket \mathcal{U} \rrbracket A B \triangleq \Sigma(R : A \rightarrow B \rightarrow \mathcal{U}), R \text{ is a type equivalence}$$

[The Marriage of Univalence and Parametricity - N. Tabareau, E. Tanter, M. Sozeau. J. ACM (2021)]

- Refinements: Yes

$$2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}} = \uparrow_{\mathbb{N}} (2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}})$$

- More refinements: Yes

$$\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$$

- Identities:

$$\text{Fact } \text{addN_assoc} : \forall x \ y : \mathbb{N}, x + (y + z) = (x + y) + z.$$

- Induction principles:

$$\begin{aligned} \text{Fact } \text{N_ind} : & \forall P : \mathbb{N} \rightarrow \text{Prop}, \\ & P \ 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P \ n \rightarrow P \ (S_{\mathbb{N}} \ n)) \rightarrow \forall n : \mathbb{N}, P \ n. \end{aligned}$$

- Implications, e.g. using $\mathbb{N} \subset \mathbb{Z}$

$$\llbracket \mathcal{U} \rrbracket A B \triangleq \Sigma(R : A \rightarrow B \rightarrow \mathcal{U}), R \text{ is a type equivalence}$$

[The Marriage of Univalence and Parametricity - N. Tabareau, E. Tanter, M. Sozeau. J. ACM (2021)]

- Refinements: **Yes**

$$2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}} = \uparrow_{\mathbb{N}} (2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}})$$

- More refinements: **Yes**

$$\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$$

- Identities: **Yes**

Fact `addN_assoc` : $\forall x y : \mathbb{N}, x + (y + z) = (x + y) + z.$

- Induction principles:

Fact `N_ind` : $\forall P : \mathbb{N} \rightarrow \mathbf{Prop},$
 $P \ 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P \ n \rightarrow P \ (S_{\mathbb{N}} \ n)) \rightarrow \forall n : \mathbb{N}, P \ n.$

- Implications, e.g. using $\mathbb{N} \subset \mathbb{Z}$

Free theorems by univalent parametricity

$$\llbracket \mathcal{U} \rrbracket A B \triangleq \Sigma(R : A \rightarrow B \rightarrow \mathcal{U}), R \text{ is a type equivalence}$$

[The Marriage of Univalence and Parametricity - N. Tabareau, E. Tanter, M. Sozeau. J. ACM (2021)]

- Refinements: **Yes**

$$2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}} = \uparrow_{\mathbb{N}} (2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}})$$

- More refinements: **Yes**

$$\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$$

- Identities: **Yes**

Fact `addN_assoc` : $\forall x y : \mathbb{N}, x + (y + z) = (x + y) + z.$

- Induction principles: **Yes, but assuming the univalence axiom**

Fact `N_ind` : $\forall P : \mathbb{N} \rightarrow \mathbf{Prop},$
 $P \ 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P \ n \rightarrow P \ (S_{\mathbb{N}} \ n)) \rightarrow \forall n : \mathbb{N}, P \ n.$

- Implications, e.g. using $\mathbb{N} \subset \mathbb{Z}$ **No**

A hierarchy of structures on relations

Let $G_\phi \triangleq \{(x, y) \mid y = \phi x\}$ and define $\llbracket \mathcal{U} \rrbracket^{k,l}$ for $k, l \in \{0, 1, 2a, 2b, 3, 4\}$ as:

Examples:

- $\llbracket \mathcal{U} \rrbracket^{0,0}$: arbitrary relation
- $\llbracket \mathcal{U} \rrbracket^{4,4}$: type equivalence
- $\llbracket \mathcal{U} \rrbracket^{1,0}$: existence of a map
- $\llbracket \mathcal{U} \rrbracket^{3,3}$: type isomorphism
- $\llbracket \mathcal{U} \rrbracket^{3,2a}$: \mathbb{N} and \mathbb{Z}_n
- $\llbracket \mathcal{U} \rrbracket^{3,2b}$: $\mathbb{R}_{\geq 0}$ and $\overline{\mathbb{R}}_{\geq 0}$

Abstraction theorems:

- When restricting to $\llbracket \mathcal{U} \rrbracket^{0,0}$

J.-P. Bernardy, M. Lasson et al. 2010 - 2013

- When restricting to $\llbracket \mathcal{U} \rrbracket^{4,4}$, under the univalence axiom

[The Marriage of Univalence and Parametricity - N. Tabareau, E. Tanter, M. Sozeau. J. ACM (2021)]

Generalized parametricity translations

Abstraction theorems:

- When restricting to $\llbracket \mathcal{U} \rrbracket^{0,0}$

J.-P. Bernardy, M. Lasson et al. 2010 - 2013

- When restricting to $\llbracket \mathcal{U} \rrbracket^{4,4}$, under the univalence axiom

[The Marriage of Univalence and Parametricity - N. Tabareau, E. Tanter, M. Sozeau. J. ACM (2021)]

Trocq:

- **More** relations

Abstraction theorems for $\llbracket \mathcal{U} \rrbracket^{k,l}$

- **Stronger** free theorems

Non-systematic usage of the univalence axiom

- **Implemented**

Translation and inference algorithm, programmed in Coq-Elpi

[Proof transfer for free, beyond univalence and equivalence, Cyril Cohen, Enzo Crance, A.M. - TOPLAS 2025]

The `trocq` proof command is typically useful to prove a goal $G_1 \rightarrow G_2$, by:

- Trying to construct a relation at level $(1, 0)$ between the G_1 and G_2 ;
- Gradually computing sufficient conditions and synthesizing the proof;
- Finding base cases proofs of relations in a data-base populated by users.

Note: Lucie Lahaye recently proved the optimality of these conditions.

- Refinements:

$$2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}} = \uparrow_{\mathbb{N}} (2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}})$$

- More refinements:

$$\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$$

- Identities:

Fact `addN_assoc` : $\forall x \ y : \mathbb{N}, x + (y + z) = (x + y) + z.$

- Induction principles:

Fact `N_ind` : $\forall P : \mathbb{N} \rightarrow \text{Prop},$
 $P \ 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P \ n \rightarrow P \ (S_{\mathbb{N}} \ n)) \rightarrow \forall n : \mathbb{N}, P \ n.$

- Implications, e.g using $\mathbb{N} \subset \mathbb{Z}$

- Refinements: **Yes**

$$2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}} = \uparrow_{\mathbb{N}} (2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}})$$

- More refinements: **Yes**

$$\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$$

- Identities: **Yes**

Fact `addN_assoc` : $\forall x \ y : \mathbb{N}, x + (y + z) = (x + y) + z.$

- Induction principles: **Yes, without assuming the univalence axiom**

Fact `N_ind` : $\forall P : \mathbb{N} \rightarrow \mathbf{Prop},$
 $P \ 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P \ n \rightarrow P \ (S_{\mathbb{N}} \ n)) \rightarrow \forall n : \mathbb{N}, P \ n.$

- Implications, e.g using $\mathbb{N} \subset \mathbb{Z}$ **Yes**

- Refinements: **Yes**

$$2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}} = \uparrow_{\mathbb{N}} (2_{\mathbb{N}} +_{\mathbb{N}} 1_{\mathbb{N}})$$

- More refinements: **Yes**

$$\sum_{i=0_{\mathbb{N}}}^{17} i = \uparrow_{\mathbb{N}} \sum_{i=0_{\mathbb{N}}}^{17_{\mathbb{N}}} i$$

- Identities: **Yes**

Fact `addN_assoc` : $\forall x \ y : \mathbb{N}, x + (y + z) = (x + y) + z.$

- Induction principles: **Yes, without assuming the univalence axiom**

Fact `N_ind` : $\forall P : \mathbb{N} \rightarrow \mathbf{Prop},$
 $P \ 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P \ n \rightarrow P \ (S_{\mathbb{N}} \ n)) \rightarrow \forall n : \mathbb{N}, P \ n.$

- Implications, e.g using $\mathbb{N} \subset \mathbb{Z}$ **Yes**

And more, e.g. setoid, generalized rewriting, coercions and cast insertion, etc.

Demo and conclusion

The Trocq plugin by examples: elementary number theory

- User input:
 - $(3, 2_a)$ -relate \mathbb{Z}_9 and \mathbb{Z} , and their zero, multiplication, addition.

The Trocq plugin by examples: elementary number theory

- User input:
 - $(3, 2_a)$ -relate \mathbb{Z}_9 and \mathbb{Z} , and their zero, multiplication, addition.
 - Also relate their 3-divisibility :

$$3 \mid (x \bmod 9) \Rightarrow 3 \mid x.$$

- Transfer from \mathbb{Z}_9 to \mathbb{Z} :

```
Lemma flt3_step :  
  (forall (m n p :  $\mathbb{Z}_9$ ), m * n * p  $\neq$  0 [mod 3] -> (m^3 + n^3)  $\neq$  p^3) ->  
  (forall (m n p :  $\mathbb{Z}$ ), m * n * p  $\neq$  0 [mod 3] -> (m^3 + n^3)  $\neq$  p^3).  
Proof. by trocq=> /=. Qed.
```

- Trocq streamlines and extends several crucial automation devices.
- More fruits can surely be reaped from the theory of programming languages.
- Formalizing mathematics should and will become easier and faster.

The Trocq plugin by example: natural numbers

- User input:

$$\forall x, \downarrow_{\mathbb{N}} (\uparrow_{\mathbb{N}} x) = x \quad \downarrow_{\mathbb{N}} 0_{\mathbb{N}} = 0_{\mathbb{N}} \quad \forall x, \downarrow_{\mathbb{N}} (S_{\mathbb{N}} x) = S_{\mathbb{N}} (\downarrow_{\mathbb{N}} x)$$

\Rightarrow (2a,3)-relate \mathbb{N} and \mathbb{N} .

The Trocq plugin by example: natural numbers

- User input:

$$\forall x, \downarrow_{\mathbb{N}} (\uparrow_{\mathbb{N}} x) = x \quad \downarrow_{\mathbb{N}} 0_{\mathbb{N}} = 0_{\mathbb{N}} \quad \forall x, \downarrow_{\mathbb{N}} (S_{\mathbb{N}} x) = S_{\mathbb{N}} (\downarrow_{\mathbb{N}} x)$$

\Rightarrow (2a,3)-relate \mathbb{N} and \mathbb{N} .

- Generation and axiom-free proof of the implication:

$$(\forall P : \mathbb{N} \rightarrow \text{Type}, P 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P n \rightarrow P (S_{\mathbb{N}} n)) \rightarrow \forall n : \mathbb{N}, P n) \rightarrow$$

$$\forall P : \mathbb{N} \rightarrow \text{Type}, P 0_{\mathbb{N}} \rightarrow (\forall n : \mathbb{N}, P n \rightarrow P (S_{\mathbb{N}} n)) \rightarrow \forall n : \mathbb{N}, P n$$

- Consider types

```
Inductive  $\overline{\mathbb{R}}_{\geq 0}$  : Type := Fin :  $\mathbb{R}_{\geq 0} \rightarrow \overline{\mathbb{R}}_{\geq 0}$  | Inf :  $\overline{\mathbb{R}}_{\geq 0}$ .
```

```
Record summable := {to_seq :  $\mathbb{N} \rightarrow \mathbb{R}_{\geq 0}$ ; to_seqP : summable to_seq}
```

The Trocq plugin by examples: extended reals

- Consider types

```
Inductive  $\overline{\mathbb{R}}_{\geq 0}$  : Type := Fin :  $\mathbb{R}_{\geq 0} \rightarrow \overline{\mathbb{R}}_{\geq 0}$  | Inf :  $\overline{\mathbb{R}}_{\geq 0}$ .
```

```
Record summable := {to_seq :  $\mathbb{N} \rightarrow \mathbb{R}_{\geq 0}$ ; to_seqP : summable to_seq}
```

- User input:

- (4, 2_b)-relate $\mathbb{R}_{\geq 0}$ and $\overline{\mathbb{R}}_{\geq 0}$, and their additions and sums
- (4, 2_b)-relate summable and $\mathbb{N} \rightarrow \mathbb{R}_{\geq 0}$, and their additions and sums

The Trocq plugin by examples: extended reals

- Consider types

```
Inductive  $\overline{\mathbb{R}}_{\geq 0}$  : Type := Fin :  $\mathbb{R}_{\geq 0} \rightarrow \overline{\mathbb{R}}_{\geq 0}$  | Inf :  $\overline{\mathbb{R}}_{\geq 0}$ .
```

```
Record summable := {to_seq :  $\mathbb{N} \rightarrow \mathbb{R}_{\geq 0}$ ; to_seqP : summable to_seq}
```

- User input:

- $(4, 2_b)$ -relate $\mathbb{R}_{\geq 0}$ and $\overline{\mathbb{R}}_{\geq 0}$, and their additions and sums
- $(4, 2_b)$ -relate summable and $\mathbb{N} \rightarrow \overline{\mathbb{R}}_{\geq 0}$, and their additions and sums

- Transfer from (summable sequences of positive) extended reals to reals:

```
Lemma  $\Sigma_{\mathbb{R}_{\geq 0}}\text{-add}$  :  $\forall u\ v : \text{summable}, \Sigma_{\mathbb{R}_{\geq 0}} (u + v) = \Sigma_{\mathbb{R}_{\geq 0}} u + \Sigma_{\mathbb{R}_{\geq 0}} v$ .
```

```
Proof. trocq; exact  $\Sigma_{\overline{\mathbb{R}}_{\geq 0}}\text{-add}$ . Qed.
```
